 i am getting ready for my A320 initial FFS lesson 6 within which adr 1+3 fault scenario is included. it does say clearly in the fcom abn that during this fault, landing gear has to be gravity extended and also that retraction is inhibited. i did search the fcom and previously discussed threads regarding the same topic but they don't really say why.

GENERAL INFORMATION
 If you look at FCOM 3.04.10.pg 2, you can see that F speed is the minimum speed at which the flaps may be retracted at takeoff and it is the same value for both flap 2 or 3, so really there is no point in "going" flap 2 when you already have speed for flap 1.
