General Relativity can't be quite right
Advanced General Relativity
Relativity, either special or general, has a reputation for being a little difficult and counter-intuitive. Being titled "Advanced," it might seem as if this is the last book a person should approach. Well, it isn't. A main difficulty in learning general relativity is the need to do differential geometry.

Overview. A modern self-contained introduction to key topics in advanced general relativity. The opening chapter reviews the subject, with strong emphasis on the geometric structures underlying the theory. The next chapter discusses 2-component spinor theory, its usefulness for describing zero-mass fields, its practical application via Newman-Penrose

The general principle of relativity states that the laws of physics are invariant under an arbitrary - but invertible - coordinate transformation $x^\mu \rightarrow x'^\mu = x^\mu(x')$

(1.6) under which we have that ds^2 is invariant. The same calculation as above leads to $ds'^2 = g_{\mu\nu} dx^\mu dx^\nu$ (1.7) = $g'_{\mu\nu} dx'^\mu dx'^\nu$ (1.8) = $g_{\mu\nu} dx^\mu dx^\nu$ (1.9)

Advanced Lectures on General Relativity
Advanced Lectures on General Relativity.
These lecture notes are intended for starting PhD students in theoretical physics who have a working knowledge of General Relativity. The 4 topics covered are (1) Surface charges as conserved quantities in theories of gravity; (2) Classical and holographic features of three-dimensional Einstein gravity; (3) Asymptotically flat spacetimes in 4 dimensions: BMS group and memory effects; (4) The Kerr black hole: properties at extremality and quasi-normal ...

Advanced General Relativity ...

General relativity, also known as the general theory of relativity, is the geometric theory of gravitation published by Albert Einstein in 1915 and is the current description of gravitation in modern physics. General relativity generalizes special relativity and refines Newton's law of universal gravitation, providing a unified description of gravity as a geometric property of space and time or ...

Tests of general relativity serve to establish observational evidence for the theory of general relativity. The first three tests, proposed by Albert Einstein in 1915, concerned the "anomalous" precession of the perihelion of Mercury, the bending of light in gravitational fields, and the gravitational redshift. The precession of Mercury was already known; experiments showing light bending in accordance with the predictions of general relativity were performed in 1919, with increasingly ...
