This can occur if the balance shaft belt slips a tooth, the balance shaft belt is broken, or if the balance shaft sprockets are installed incorrectly. Quite often, balance shaft sprocket misalignment occurs after water pump, crankshaft oil seal, or balance shaft oil seal replacement. The following procedure will tell you how to correctly install the balance shaft sprockets and how to check them for proper alignment if you suspect that the sprockets may have been installed incorrectly.

You are looking for the balance shaft weights  
to be perpendicular and opposite of the  
crankshaft weights. You can experiment  
with one tooth in either direction and it is  
obviously out of alignment. Each tooth is  
8.37 degrees (43 teeth), so you can see that  
much error without any special equipment.
