Seafood and related products have an important place in the human diet; it provides for the protein needed and has a nutritional composition that has favorable health impacts on human beings. Considering the rapid increase in the world population and the

Where To Download

Demand in terms of protein needs that are provided by seafood, the necessary need to assure the quality and safety of seafood products has been prioritised. Due to nutritional composition, neutral pH, high moisture content, weak

connective tissue

and living

environment (fresh
and seawater),
seafood is very
perishable.

Maintaining the
quality and safety
of seafood needs
higher attention
compared to other
food products. This
handbook compiles
recent methods and

applications, as well as technologies utilised to guarantee the quality and safety of various types of seafood from harvesting to the retail level. The status of emerging and hurdle technology applications, genomic,

Where To Download

mathematical and computer-based methods, quality economics together with chemical, sensory and microbiological changes, and quality/safety of seafood products are reviewed and discussed in this book. The emphasis on less-known or
