Calculus I with Maple. Wednesday, September 2, 1998 . The Slope of a Curve

. In the notes on polynomial calculus, we talk about finding the slope of a curve.

The basic idea is that if we look at a sufficiently small piece of a curve like $y = x^2$, then that piece of curve will look very much like a straight line. For example, we saw that if we ...

Hagin

$f(x) = x/(x-1)$ Solution.

The function name is f , the independent variable is x and the function rule is $x/(x-1)$. So the function can be defined in Maple by the following command.

$f:=x \rightarrow x/(x-1)$ Once the function is defined, you may find the function value by the command $f(0.999)$. Remark.
