Catheterisation The

Cardiac catheterisation is an invasive diagnostic procedure that provides important information about the structure and function of the heart. It usually involves taking X-rays of the heart's arteries (coronary arteries) using a technique called coronary angiography or arteriography. The resulting images are known as coronary angiograms or arteriograms.

Cardiac catheterisation and coronary angiography - NHS

Cardiology is becoming an increasingly complex field understood by only a select group of medical specialists. This publication demystifies many difficult topics in interventional cardiology and cardiac catheterisation, commencing with the basics of laboratory instrumentation

attacks etc) and heart rhythm
problems.

Cardiovascular - Barts Health NHS
Trust

A cardiac catheterisation, or coronary angiogram, is a special test to find out if you have any problems with the coronary arteries (blood vessels that supply the heart muscle with oxygen), and to find out how well the pumping chambers and valves in your heart are working. A cardiac catheterisation will give your doctor information about your heart that they cannot always get from other tests.

Cardiac catheterisation - Cardiology |
BMI Healthcare UK

Cardiac catheterisation is a procedure in which a very thin plastic catheter is passed into the chambers of the heart.

Download Free Cardiology And Cardiac

The catheter can also be passed into the main blood vessels of the heart (the coronary arteries).

Cardiac Catheterisation. Heart problems; information | Patient
During cardiac catheterization, a long thin tube called a catheter is inserted in an artery or vein in your groin, neck or arm and threaded through your blood vessels to your heart. Using this catheter, doctors can then do diagnostic tests as part of a cardiac catheterization. Some heart disease treatments, such as coronary angioplasty and coronary stenting, also are done using cardiac catheterization.

Interventional Cardiology and Cardiac Catheterisation ...

Cardiac Catheterisation Many children will need a "Catheter Test". This is carried out in a special Xray room - called "The Catheter Lab" (or 'Angiography Suite'). The test is performed under an anaesthetic for most young children, though for some older patients it can be carried out with a local anaesthetic.
