Written for intermediate-level undergraduates pursuing any science or engineering major, Physical Models of Living Systems helps students develop many of the competencies that form the basis of the new MCAT2015. The only prerequisite is first-year physics. With the more advanced "Track-2" sections at the end of each chapter, the book can be used in graduate-level courses as well.

Biology 2e (2nd edition) is designed to cover the scope and sequence requirements of a typical two-semester biology course for science majors. The text provides comprehensive coverage of foundational research and core biology concepts through an evolutionary lens. Biology includes rich features that engage students in scientific inquiry, highlight careers in the biological sciences, and offer everyday applications. The book also includes various types of practice and homework questions that help students understand -- and apply -- key concepts. The 2nd edition has been revised to incorporate clearer, more current, and more dynamic explanations, while maintaining the same organization as the first edition. Art and illustrations have been substantially improved, and the textbook features additional assessments and related resources.

Nelson Review of Pediatrics offers you a convenient and effective way to prepare for pediatrics examinations as well as to evaluate and refine your familiarity with the state of the art in this field. More than 1000 questions cover 34 major topic areas - including growth and development, human genetics, and environmental health hazards. These questions appear in case-based, multiple-choice, and matching formats, allowing you to check your knowledge in a variety of challenging ways. Concise, yet detailed, answers enhance your understanding of the full range of subjects in pediatrics. Nelson Review of Pediatrics is superb as a stand-alone resource. It can also be used as a companion to the Nelson Textbook of Pediatrics, 15th Edition - one of the most acclaimed and widely used references in the field.

International Review of Cytology presents current advances and comprehensive reviews in cell biology both plant and animal. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research.

Unchecked aggression and violence take a significant toll on society. With recent advances in pharmacology and genetic manipulation techniques, new interest has developed in the biological mechanisms of aggression. The primary goal of this title is to summarise and synthesis recent advances in the subject.

Written to the highest achievement standard, this visually engaging series brings Biology to life with clear language and relevant examples. New case studies and Scientific Literacy boxes in every chapter help students to connect with the study of Biology to the real world.

Offering coverage of a wide range of topics on snake reproduction and phylogeny, this comprehensive book discusses everything from primordial germ migration in developing embryos to semelparity (death after reproduction) in the aspic viper. Beginning with a review of the history of snake reproductive studies, it presents new findings on development, placentation, spermatogenesis, male and female reproductive anatomy, hormonal control of reproduction, reproductive cycles, sex pheromones, and parental care. An indispensable reference, this book offers comparative chapters on snake phylogenetics examining morphological characteristics alongside strictly molecular concerns. It is rife with illustrations and color plates.

The focus of this book is on mechanical aspects of skeletal fragility related to aging and osteoporosis. Topics include: Age-related changes in trabecular structure and strength; age-related changes in cortical material properties; age-related changes in whole-bone structure; predicting bone strength and fracture risk using image-based methods and finite element analysis; animal models of osteoporosis and aging; age-related changes in skeletal mechano responsiveness; exercise and physical interventions for osteoporosis.

This book is the result of an international symposium in biological psychology, held in honor of Knut Larsson. This renowned researcher -- in his search for the true meaning of "mind vs. matter" -- became involved in many divergent areas of the field, such as the neurobiology of sexual behavior and sexual differentiation, aspects of functional neuroanatomy, behavioral endocrinology, and psychopharmacology. Through experimentation and much consultation with other area specialists, Larsson observed such phenomena as the adaptation of behavior-determining neuroendocrine events to the physical environment and the hormonal regulation of sexual behavior and differentiation. This tribute to his research presents important features of necessary paradigms for the analysis and study of experimental psychology within the biological perspective.
