Configuring for high availability with shared storage

HAProxy(High Availability Proxy) is an open source load balancer which can load balance any TCP service. It is particularly suited for HTTP load balancing as it supports session persistence and layer 7 processing.

How To Use HAProxy to Set Up HTTP Load Balancing on an ...

Heartbeat is typically used in conjunction with a cluster resource manager (CRM), such as Pacemaker, to achieve a complete HA setup. However, in this tutorial, we will demonstrate how to create a 2-node HA server setup by simply using Heartbeat and a DigitalOcean Floating IP.

How To Create a High Availability Setup with Heartbeat and ...

Scale-Out File Server must be configured for continuous availability. To configure the File Server role. Sign in to the server as a member of the local Administrators group. To open Failover Cluster Manager in Server Manager, click Tools, and then click Failover Cluster Manager. Right-click the name of the cluster, and then click Configure Role. On the Before You Begin page, click Next. On the Select Role page, click File Server, and then click Next.

Step 2: Configure Scale-Out File Server | Microsoft Docs

DFS-R makes multiple copies of your data, so you consume more storage. DFS-R doesn't have native file locking, so you can't have multiple users accessing the same file on more than one server at a time. This means that you can't have DFS Namespace point to two active servers at once. Files are not replicated between servers until they are closed.

HA File Servers and/or DFS/Clustering? - Windows Server ...

To configure the file server: Go to Extensions > File Server > Status > Preferences. To change the workgroup for your server on the Microsoft network, click in the Workgroup field and enter the name of a... You can also configure the following security parameters for your Samba ...

Configuring File Server | Plesk 12.5 documentation

Hi All What's the difference between creating a High Availability Virtual Machine to use as a File Server and creating a 'File Server for general use' in the High Availability Wizard? Thanks in advance. - Speed of recovery in case of a major failure. If you create a VM in a cluster and assign it the role of a file server, it works fine. But if the node ...

2012 R2 - Clustering High Availability File Server

HA clustering remedies this situation by detecting hardware/software faults, and immediately restarting the application on another system without requiring administrative intervention, a process known as failover. As part of this process, clustering software may configure the node before starting the application on it.

High-availability cluster - Wikipedia

You can configure a File Share Witness on a Scale-Out File Server as follows: 1) Create the Scale-Out File Server as described in Section 2.1 of this article. 2) Create a File share on the Scale-Out File as described in Section 2.2 of this article.

Configuring a File Share Witness on a Scale-Out File Server

NOTE: To configure File Server for General Use, the cluster should have available storage. 1. To configure the Scale-Out File Server role, open Failover Cluster Manager 2. Right-click on the cluster name, then click Configure Role and click Next to continue. 3. Select the File Server item from the list in High Availability Wizard and click Next to continue. 4.
