Design-to-Production created
a digital 3D-model in
production quality and
delivered data for CNC-
fabrication of all 637
individual panels and their
nearly 1000 connections just
seven weeks after the first
project meeting in October
2016. Due to the tight
schedule, a main focus was
to quickly develop
parametric details in close
collaboration with the
engineers, which can be
precisely pre-fabricated and
are easy to assemble.

Fabrication capabilities at the Iowa State University's Microelectronics Research Center have recently been expanded significantly to include CMOS processing. Intended for academic lab use as well as to provide the flexibility of fabrication using more modern processing, the CMOS-70 process will be a significant boon to researchers looking for ways to design and test circuits with quick turn-around time and greater control over processing parameters. The development and proof of this new capability has been
