When twins are monozygotic, they are considered identical. If twins are identical, they come from one zygote that split into two. Fraternal twins are formed in two different eggs, which are fertilized by two different sperm cells. While identical twins share identical genomes, they are not necessarily alike in all physical features.

**Identical Twins, Identical Fates? by Katherine Le**

No, identical twins are not completely identical due to environmental factors and small differences in gene code, such as gene code for diseases and fingerprints. DNA methylation is when the nitrogenous base cytosine receives a methyl group (CH<sub>3</sub>) in the place of where a Hydrogen would normally be.

Identical Twins, Identical Fates? Introduction to Epigenetics. This was a case study about twin sisters, where one has schizophrenia while the other didn't. This brought into question, how alike are twins? Identical twins are born with the same DNA, but over time, epigenetics cause modifications to the DNA, making the twins less identical genetically.
