Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-

step guide shows anyone how to make their bike, or their kid's, handle like a pro's. The book gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is

"the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.

In *The Protein Protocols Handbook*, I have attempted to provide a cross-section of analytical techniques commonly used for proteins and peptides, thus providing a benehtop manual and guide both for those who are new to the protein chemistry laboratory and for those more established workers who wish to use a technique for the first time. We each, of course, have our own favorite, commonly used gel system, g-staining method, blotting method, and so on; I'm sure you will find yours here. H- ever, I have also described a variety of altematives for many of these techniques; though they may not be superior to the methods you commonly use, they may nev- theless be more appropriate in a particular situation. Only by knowing the range of techniques that

are available to you, and the strengths and limitations of these techniques, will you be able to choose the method that best suits your purpose.

How to Build a Cheap Chopper was originally written to give chopper builders of the day a way to build cool, functional choppers for cheap money. Instead of building bikes out of a catalogue, readers were encouraged to combine a donor bike with an aftermarket frame. With a Sportster or Metric bike as a foundation, and a hard-tail frame, a complete bike could be assembled for less than \$5,000, sometimes much less. Today, there's a whole new generation of riders looking to build simple, functional, unique choppers and bobbers based on everything from a 200cc Honda to the old classic Shovelhead or Panhead engines. No matter which drivetrain they choose, there remains the need to build bikes that work, bikes that are safe to ride, bikes that are fun! How to Build a Cheap Chopper- Revised starts with a look at the basics. The first chapters cover brakes, drivetrains, and frame geometry. The second half of the book shows readers how to actually assemble a bike. Four start-to-finish assemblies done at professional shops take the reader from a pile of parts to a finished, running motorcycle.
