The logrank test, or log-rank test, is a hypothesis test to compare the survival distributions of two samples. It is a nonparametric test and appropriate to use when the data are right skewed and censored (technically, the censoring must be non-informative). This book calls for a multidimensional and comprehensive approach to reduce the number of school shootings, rather than the simplistic unidimensional strategy that is commonly advocated. Based on meta-analyses examining which variables are most often related to positive changes in violent student behavior, it also integrates other research and historical trends in order to formulate recommendations regarding how to reduce school shootings. The topic of school shootings is one of the most vital issues in society today, because: 1) schools should be the safest places on Earth for children, 2) if students do not feel safe, they are not going to learn very well in school, and 3) it is of such great concern to parents and society at large, as evinced by the degree of news coverage that school shooting incidents receive. Sadly, despite the gravity of the problem, many people tend to either respond in an emotional way or propose simplistic solutions. Gun control legislation alone will not solve the problem; instead, it calls for a multi-disciplinary and multifaceted approach, involving parents, teachers, schools and healthcare. This book investigates the status quo, goals, and solutions, pursuing a fact-based approach. This book is of special interest to the academic community, national leaders, and other policymakers. It is also suitable for courses on education, psychology, sociology, criminal justice and other areas of law. It will also appeal to the general audience.

This handbook unifies access and opportunity, two key concepts of sociology of education, throughout its 25 chapters. It explores today's populations rarely noticed, such as undocumented students, first generation college students, and LGBTQs; and emphasizing the intersectionality of gender, race, ethnicity and social class. Sociologists often center their work on the sources and consequences of inequality. This handbook, while reviewing many of these explanations, takes a different approach, concentrating instead on what needs to be accomplished to reduce inequality. A special section is devoted to new methodological work for studying social systems, including network analyses and school and teacher effects. Additionally, the book explores the changing landscape of higher education institutions, their respective populations, and how labor market opportunities are enhanced or impeded by differing postsecondary education pathways. Written by leading sociologists and rising stars in the field, each of the chapters is embedded in theory, but contemporary and futuristic in its implications. This Handbook serves as a blueprint for identifying new work for sociologists of education and other scholars and policymakers trying to understand many of the problems of inequality in education and what is needed to address them.
