SQL Query Tuning or Query Optimization
SQL performance tuning is the process of improving the performance of SQL statements. You want to make sure that SQL statements run as fast as possible. Fast and efficient statements take up fewer hardware resources and perform better. In contrast, an unoptimized inefficient statement will take longer to complete and take up more computing power.

Performance Tuning in SQL (How to Optimize Performance!)
SQL Tuning provides an essential next step for SQL developers and database administrators who want to extend their SQL tuning expertise and get the most from their database applications. There are two basic issues to focus on when tuning SQL: how to find and interpret the execution plan of an SQL statement and how to change SQL to get a specific alternate execution plan.
