While about \$1.5bn in fish is sold each way annually, fisheries account for just 0.12% of the UK economy and employ only 24,000 workers. It's a sardine-sized share of the EU's economy too.

The relevant laws were developed at different times by different groups of states. They are motivated by divergent economic approaches, influenced by disparate non-state actors, and implemented by separate institutions such as the World Trade Organization and the United Nations Food and Agriculture Organization. Margaret Young shows how these and other factors affect the interaction between regimes. Her empirical and doctrinal analysis moves beyond the discussion of conflicting norms that has dominated the fragmentation debate. Case-studies include the

negotiation of new rules on fisheries subsidies, the restriction of trade in endangered marine species and the adjudication of fisheries import bans. She explores how regimes should interact, in fisheries governance and beyond, to offer insights into the practice and legitimacy of regime interaction in international law.

science in advising decision-makers is a sensitive issue, which deserves scrutiny and is similar in many regimes. Finally, the complex problem of fragmentation of international law is acute in various fields of environmental law, as in all rapidly developing areas of international regulations.

An increasing number of commercially exploited and managed aquatic species has been listed in the Appendices to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), triggering the attention from the fisheries sector of

States on how listing would impact on the management of the relevant fisheries. CITES regulates international trade in certain aquatic species, including those which are, and can be, commercially exploited and which are being managed by the fisheries sector. The fisheries sector legal frameworks will have to recognize and enable the various requirements provided for in CITES, including the making of non-detriment findings and ensuring that there is a designated management authority and scientific authority to take certain

decisions in respect of listed commercially exploited and managed aquatic species. This sourcebook provides clarifications on the relationship of CITES with the fisheries sector and provides guidance on how national fisheries legal frameworks can optimize the implementation of CITES. The realisation of this sourcebook in 2020, designated as a “super year” for nature and biodiversity, represents a timely and useful contribution to fisheries management, by (i) raising awareness of CITES; (ii) enhancing comprehension of the CITES regime and its

relationship with the fisheries sector and (iii) where a deliberate decision is made by a country to implement CITES through its national fisheries legal frameworks, providing guidance as to what do it and how to do it.

Considering that natural resources or green capital are the drivers of globalisation, this book focuses on the link between investment, trade and natural resource management in the context of the growing economic inequalities between states.

pressing issue of food security through a range of interdisciplinary contributions, providing both scholarly and policy-making perspectives. It sets the discussion on food security within the little-studied context of its international legal and regulatory framework. The expert contributors explore the key issues from a development perspective and through the lens of existing governance and policy systems with a view to articulating how these systems can be made more effective in dealing with the roots of food insecurity. The book

considers the root causes of food insecurity before discussing the regulatory challenges inherent in reconciling food production and sustainability to ensure both adequate supply of and equitable access to food, particularly in light of emerging issues such as food price volatility, 'land grabbing' and the need to coordinate the actions of the multitude of actors that influence food policy and regulation. It highlights the need for more equitable, transparent and coherent policy and regulatory approaches to the myriad of issues that make up the food security challenge. This

cross-cutting study will appeal to researchers in law, international relations, agricultural science and food systems, as well as to policy makers in government and international organisations that engage with policy and regulation of food security issues. It will also be essential reading for professionals in non-governmental organisations that are interested in development issues in general and food security in particular.

The book analyses how international law addresses interactions between international organizations.

In labour governance, these interactions are ubiquitous. They offer each organization an opportunity to promote its model of labour governance, yet simultaneously expose it to adverse influence from others. The book captures this ambivalence and examines the capacity of international law to mitigate it. Based on detailed case studies of mutual influence between the International Labour Organization, the World Bank, and the Council of Europe, the book offers an in-depth analysis of the pertinent law and its key challenges, both at

The planet will be home to more than 9 billion people by 2050, and we're already seeing critical levels of famine around the world mirrored by growing obesity in developed nations. In *The Perfect Protein*, Andy Sharpless maintains that protecting wild seafood can help combat both issues,

because seafood is the healthiest, cheapest, most environmentally friendly source of protein on earth.

While the conservation community has taken a simplistic, save-the-whales approach when it comes to oceans, Sharpless contends that we must save the world's seafood not just to protect marine life and biodiversity but to stave off the coming humanitarian crisis. With high demand for predator species like tuna and salmon, wealthy nations like the U.S. convert "reduction" species such as anchovies, mackerel, and sardines into feed for salmon and other farmed

animals—even though these overlooked fish are packed with health-boosting Omega-3 fatty acids and could feed millions. By establishing science-based quotas, protecting wild habitats, and reducing bycatch (and treating anchovies and their like as food, not feed), Sharpless believes that effective ocean stewardship can put healthy, sustainable seafood on the table forever. To that end, Oceana has tapped 20-plus chefs, including Mario Batali, Eric Ripert, and Jose Andres for recipes that give us all a role to play in this revolutionary mission: to save the fish so that we can
